The EBDHS-PRM PIR (passive infrared) presence detector provides automatic control of lighting loads with optional manual control. The EBDHS-PRM is a high sensitivity PIR detector suitable for high bay applications, such as warehouses and factories, and where high detection sensitivity is needed.

The output channel comprises a mains voltage relay capable of simple on/off switching.

Functioning as a presence detector, the unit can turn lights on when a room is occupied and off when the room is empty. Optional settings allow lights to be turned off in response to ambient daylight.

All functionality is fully programmable using an IR handset.

---

**Features**

**Front features**
- Mounting Bezel

**Back features**
- Retaining Spring

**PIR Sensor**
Detects movement within the unit’s detection range, allowing load control in response to changes in occupancy.

**IR Receiver**
Receives control and programming commands from an IR (infrared) handset.

**Light Level Sensor**
Measures the overall light level in the detection area.

**Status LEDs**
The LED flashes Red to indicate the following:

<table>
<thead>
<tr>
<th>Status</th>
<th>LED Indication</th>
</tr>
</thead>
<tbody>
<tr>
<td>Walk Test</td>
<td>when movement is detected</td>
</tr>
<tr>
<td>Test LED active</td>
<td></td>
</tr>
<tr>
<td>Valid setting received</td>
<td></td>
</tr>
</tbody>
</table>

**Power Input & Switched Output Connector**
Used to connect mains power to the unit and to connect a switched load.

**Switch Input Connector**
Two input terminals can be used to manually override the lights on or off (not fitted to EBDHS-PSUR-PRM).

---

**EBDHS-PRM-LT30**
A special order version that can be used down to -30°C.

Alignment marks

The sensor head has 4 alignment marks. These correspond to the 4 outer passive infrared sensors under the lens. Use these marks to align with aisles and corridors to ensure the best detection characteristics. See example overleaf.
**Masking**

The EBDHS-PRM includes two clip-on masking shields to allow for precise masking of the detection shape. The masks can be easily shaped to produce detection patterns suitable for applications such as aisles and corners and for narrowing the detection diameter.

**Important note.** Ensure all infra-red (IR) programming is completed before affixing the masking shields to the detector. The masking shields may impair the light sensor and IR sensors by covering them. Ensure correct operation before completing commissioning.

*Radial tear pattern for narrowing the detection diameter*

*Lateral tear pattern for making a ‘slot’ style detection shape*

**Applications**

**Aisles**

Masking shields trimmed for aisle shaped detection

Align trimmed shields with sensor head alignment marks and aisle.

**Example**

Mounting height

<table>
<thead>
<tr>
<th>Slot number</th>
<th>Masking shield % coverage</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>45%</td>
</tr>
<tr>
<td>2</td>
<td>32%</td>
</tr>
<tr>
<td>3</td>
<td>22%</td>
</tr>
<tr>
<td>4</td>
<td>11%</td>
</tr>
</tbody>
</table>

Trimmer to slots

16m x 32% = 5.1m walk across
12m x 32% = 3.8m walk towards

**Narrow detection**

Masking shields trimmed for a narrow beam of detection

**Example**

Mounting height

<table>
<thead>
<tr>
<th>Diameter number</th>
<th>Masking shield % coverage</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>89%</td>
</tr>
<tr>

<td>63%</td>
</tr>
<tr>
<td>3</td>
<td>45%</td>
</tr>
<tr>
<td>4</td>
<td>32%</td>
</tr>
<tr>
<td>5</td>
<td>22%</td>
</tr>
</tbody>
</table>

Trimmer to diameter

40m x 45% = 18m walk across
30m x 45% = 13.5m walk towards
**Sensor functionality**

**Detection Mode**
The Detection Mode can be set to behave in Presence or Absence mode:
- **Presence**: When movement is detected the load will automatically turn on. When the area is no longer occupied the load will automatically switch off after an adjustable time period.
- **Absence**: The load is manually switched on. When the area is no longer occupied the load will automatically switch off after the adjustable time period has elapsed.

In either case, sensitivity to movement of the PIR sensor can be adjusted using the Sensitivity parameter.

*HINT: To assist in setting the Sensitivity, turn on the Walk Test LED which will flash red when movement is detected.*

**Switch Level On/Off**
Occupancy detection can be made dependant on the ambient light level using the Lux On Level and Lux Off Level parameters.

**Absence detection**
- To use absence detection a retractive (momentary) switch must be connected between the 2 terminals on the diagram. Note that this will be switching mains voltage.
- The unit ships with presence detection as default. To change to absence detection, press and release the external switch 5 times within the first minute of power up. The LED will turn on solid for 30 seconds to indicate absence mode has been selected.
- To change back to presence detection, repeat the above procedure—the LED will flash for 30 seconds to indicate presence mode has been selected.

*Note:* the above adjustments can also be made using the UHS5 or UNLCDHS handsets. See Programming sections.

**External Circuit Protection 10A**

**Choosing a Suitable Location**
The EBDHS-PRM is designed to be ceiling mounted and must satisfy the following criteria:
- Avoid positioning the unit where direct sunlight may enter the sensor element.
- Do not site the sensor within 1m of any lighting, forced air heating or ventilation.
- Do not fix the sensor to an unstable or vibrating surface.

**Readback function (UNLCDHS handset only)**
The UNLCDHS has the ability to read back the settings stored in a device.

**To read back individual parameters**
- Navigate to the parameter and press the ‘R’ (Read) button whilst pointing at the device. The handset will click when the parameter has been read back, the device will flash its LED, and the value will be shown against the parameter in the menu.

**To read back all of the parameters in a menu**
- Press and hold the ‘R’ (Read) button for more than 1 second.
- The handset will click every time a parameter is received.
- The device will show multiple flashes of its LED.
- All of the values will be shown against the parameters in the menu.
- The individual parameters may be edited and then saved as a ‘Macro’.

**Notes**
- If a parameter(s) has been missed because of a communication error, the missing value(s) is replaced by dashes.
- When reading back, the Channel 1 relay (where fitted) will temporarily be switched off, and will return to it’s normal state 2 seconds after the read back has been completed.
When power is applied to the unit, the load will turn on immediately.

Set the timeout to 10 seconds, vacate the room or remain very still and wait for the load to switch off.

Check that the load switches on when movement is detected.

The unit is now ready for programming.

**Assembly**

The EBDHS-PRM may be supplied in two parts. Follow the instructions to assemble.

**Safety note**

EBDHS-PRM EBDHS-PSUR-PRM

Only apply power when the sensor head has been locked into position onto power supply.

**Power-up test procedure**

The EBDHS-PRM is designed to be mounted using either:
- Flush fixing, or
- Surface fixing, using the optional Surface Mounting Box (part no. DBB).

Both methods are illustrated below.

Use the supplied gasket to ensure IP rating (not compatible with Surface Mounting Box part no. DBB).

**Flush Fixing**

Warning - be careful bending springs when mounting unit.

**Surface Fixing**

50mm or 60mm fixing centres

Pull out spring tab and rotate spring arm as shown

Important

Ensure that the cables are formed as shown before affixing the cable clamp. The clamp MUST clamp the outer sheath(s) only.

Bend cores as shown.

**Wire stripping details**

35 mm
Basic programming

The functionality of the EBDHS-PRM is controlled by a number of parameters which can be changed or programmed by any of the following devices:

- **UHS5** Infrared Handset. See below for programmable functions.
- **UNLCDHS** Infrared Handset (with LCD). See user guide for full programming details.

For most basic programming operations the UHS5 handset can be used and the following procedures are based on using this device.

Point the handset at the Sensor and send the required programming commands to the unit as shown below.

Valid commands will be indicated by a red LED flash. See page 1 for details of other LED responses.

*Note: other functions on the UHS5 which are not shown below are not applicable to this product.*

### Fault finding

**What if the load does not turn ON?**

- Check that the live supply to the circuit is good.
- Check that the load is functioning by bypassing the sensor (e.g. link terminals L and L/Out on Channel1).
- If the detection range is smaller than expected, check the diagrams on page 2. Rotating the sensor slightly may improve the detection range.

*HINT: The Walk Test LED function can be used to check that the unit is detecting movement in the required area.*

**What if the load does not turn OFF?**

- Ensure that the area is left unoccupied for longer than the Time Out Period.
- Ensure that the sensor is not adjacent to circulating air, heaters or lamps.

<tr>
<td>Time Out</td>
<td>20 minutes</td>
<td>0-99 minutes</td>
<td>Once the detector is turned on, this value sets how long the lights will stay on once movement has ceased. Select 0 for 10 second delay – use for commissioning only.</td>
<td>☑️</td>
<td>☑️</td>
</tr>
<tr>
<td>Manual Time Out</td>
<td>10 minutes</td>
<td>0-99 minutes</td>
<td>When a manual operation occurs, either via the switch input or the infrared, it invokes the timeout period. Example 1: a detector in presence mode has a detector timeout of 15 minutes and a manual timeout of 3 minutes. When the user leaves the room they press the off button. The sensor will revert to automatic after 3 minutes, and then walking back in the room will turn the lights on. Example 2: using the settings above, the user turns the lights off (say for a presentation) but stays in the room. Every time a movement is detected, the manual timeout period is re-triggered, but when it doesn’t pick up for the short timeout period, the sensor will timeout and revert to automatic. This means the lights may turn on inadvertently during the presentation, if the occupants are still for the manual timeout period, so adjust the timing carefully.</td>

</tr>
<tr>
<td>Lux time</td>
<td>0</td>
<td>0 (disabled) 1-99 minutes</td>
<td>If the detector measures the lux level and decides that the output needs switching on or off as a consequence, the lux time must elapse first. If at any time during the timed delay the lux change reverses then the process is cancelled. Lux Time enables absence detection to be implemented with a lux off level set. When the button is pressed, the lights will go on, regardless of ambient light level. However, if there is sufficient ambient light, they will turn off again after the Lux Time. Note that whenever the an external switch is pressed, whether in absence or presence mode, if the lights were out because of the lux level, they will be immediately turned on again for at least the Lux Time.</td>
