The EBDSM-DD PIR (passive infrared) presence detector provides automatic control of lighting loads with optional manual control.

Output Channel 1 comprises a mains voltage relay capable of simple on/off switching, while Output Channel 2 provides dimmable control of either DALI or DSI type ballasts.

Functioning as a presence detector, the unit can turn lights on when a room is occupied and off when the room is empty. Optional settings allow lights to be turned off in response to ambient daylight, or to implement a maintained illuminance (daylight harvesting) system.

The flexibility of having two channels and two switch inputs allows the following example scenarios:
- Dim an outside row of luminaires whilst internal fittings are switched
- Provide absence detection for two separate channels
- Maintained illuminance system with manual up/down controls

All functionality is fully programmable using an IR handset.

### Features

**PIR Sensor**
Detects movement within the unit’s detection range, allowing load control in response to changes in occupancy.

**IR Receiver**
Receives control and programming commands from an IR (infrared) handset.

**Light Level Sensor**
Measures the overall light level in the detection area

**Status LEDs**
The LED flashes Red to indicate the following:
- Walk Test LED active
- Valid setting received

**Power Input & Switched Output Connector** (Channel 1)
Used to connect mains power to the unit and to connect a switched load.

**Dimmable Control Output Connector** (Channel 2)
Used to connect DSI/DALI controllable ballasts and transformers for dimmable loads.

**Switch Input Connector**
Two input terminals can be used to manually override the dimming levels and override the lights on or off.
Detection diagram

Area of high sensitivity

Area of lower sensitivity
Choosing a Suitable Location

The EBDSM-DD is designed to be ceiling mounted and must satisfy the following criteria:
- Avoid positioning the unit where direct sunlight may enter the sensor element.
- Do not site the sensor within 1m of any lighting, forced air heating or ventilation.
- Do not fix the sensor to an unstable or vibrating surface.

Sensor functionality

Detection Mode

The Detection Mode for both output Channels 1 and 2 can be set to behave in Presence or Absence mode:
- **Presence** When movement is detected the load will automatically turn on. When the area is no longer occupied the load will automatically switch off after an adjustable time period.
- **Absence** The load is manually switched on. When the area is no longer occupied the load will automatically switch off after the adjustable time period has elapsed.

In either case, sensitivity to movement of the PIR sensor can be adjusted using the Sensitivity parameter.

_HINT:_ To assist in setting the Sensitivity, turn on the Walk Test LED which will flash red when movement is detected.

Switch Level On/Off

Occupancy detection can be made dependant on the ambient light level using the Lux On Level and Lux Off Level parameters.

Maintained Illuminance (daylight harvesting)

The detector measures the overall light level in the detection area and calculates the correct output for the luminaires, to achieve a preset lux level (maintained illuminance or daylight harvesting).

Burn-in

Overview

It is a requirement of many fluorescent lamp manufacturers to have the lamps on at maximum output for a period of time to guarantee lamp life (refer to the manufacturer’s datasheet for details). As this EBDSM-DD is able to dim the lamps using DALI/DSI, the product provides a facility to disable this for a given period of time.

Operation

By setting the “Burn in” parameter, you can select a time during which the lamps are not allowed to deviate from maximum output. The unit counts the time, and even remembers how long has elapsed in the event of a power failure. To cancel the burn in function, simply select a time of 0. Note that when the lamps are changed, the burn in time should be set again.
**Installation**

**Choosing a suitable location**

The EBDSM-DDi system is designed to be ceiling mounted and must satisfy the following criteria:

- The sensor should be sited so that the occupants of the room fall inside the detection pattern overleaf, at a recommended height of 2.8m on the ceiling. Note that the lower the sensor is installed the smaller the detection range will be, subject to the parameters shown on the diagram.

- Avoid positioning the sensor where direct sunlight may enter the sensor element.

- Do not site the sensor within 1m of any lighting, forced air heating or ventilation.

- Do not fix the sensor to an unstable or vibrating surface.

**Readback function (UNLCDHS handset only)**

The UNLCDHS has the ability to read back the settings stored in a device.

**To read back individual parameters**

- Navigate to the parameter and press the ‘R’ (Read) button whilst pointing at the device. The handset will click when the parameter has been read back, the device will flash its LED, and the value will be shown against the parameter in the menu.

**To read back all of the parameters in a menu**

- Press and hold the ‘R’ (Read) button for more than 1 second.
- The handset will click every time a parameter is received
- The device will show multiple flashes of its LED
- All of the values will be shown against the parameters in the menu.
- The individual parameters may be edited and then saved as a ‘Macro’.

**Notes**

- If a parameter(s) has been missed because of a communication error, the missing value(s) is replaced by dashes.
- When reading back, the Channel 1 relay (where fitted) will temporarily be switched off, and will return to it’s normal state 2 seconds after the read back has been completed.
Channel 1 (switched output) of the EBDSM-DD can either be used to switch a separate channel of standard, non-dimming luminaires, or to isolate the mains supply to dimming ballasts (saving on the standby current of the ballasts). Multiple luminaires may be connected in parallel to Channel 1 (via the N and L/Out terminals) as long as the maximum total load is not exceeded.

Channel 2 (dimmable output) of the EBDSM-DD can be used to control the light output of luminaires that are fitted with dimming ballasts/transformers.

The ballasts/transformers can be connected in parallel to Channel 2 (via the DIM– and DIM+ terminals). Refer to the specification on page 12 for ballast quantities.

The wiring examples below show common methods of connecting the output channels for a single detector unit.

### Single channel dimming

**Functions:** Switches the luminaire with occupancy and maintains illuminance. Dims and switches using optional centre biased retractive switch (MK K4900 or similar).

**Configured to presence detection:** Turns on automatically with occupancy. Maintains illuminance. Press and release down switch to turn off. Press and release up switch to turn back on. Press and hold up switch to dim up, press and hold down switch to dim down. Turns off after occupancy.

**Configured to absence detection:** Press and release up switch to turn on. Maintains illuminance. Press and release down switch to turn off. Press and hold up switch to dim up, press and hold down switch to dim down. Turns off after occupancy.

**Channel mode:** Set to “Switch and dim together”.

**Switch mode:** Set to “2 position switch together”.

---

![Wiring diagrams](image_url)
Two channel, individual switches

**Functions:** Switches both channels with occupancy. Maintains illuminance, dims and switches the dimming channel using optional single position retractive switch (switch 2). Switches the switching channel using the optional single position retractive switch (switch 1).

**Configured to presence detection:** Turns on automatically with occupancy. Maintains illuminance (dimming channel only). Press and release switch to toggle output. Press and hold switch to dim up and down (reverses direction with each press). Turns off after occupancy.

**Configured to absence detection:** Press and release switch to turn on. Maintains illuminance (dimming channel only). Press and release switch to turn off. Press and hold switch to dim up and down (reverses direction with each press). Turns off after occupancy.

**Channel mode:** Set to “Switch and dim separate”

**Switch mode:** Set to “1 position switch separate”

Please note that the dimming signal is used to switch the dimming luminaire on/off and therefore the 230V feed to the luminaire fitting must come from the permanent live supply.

Please note that the centre retractive switch will provide control for the dimming luminaire(s) only. The non-dimming luminaire(s) will be controlled by the sensor.
Two channel, single switch

**Functions:** Switches both channels with occupancy. Maintains illuminance, dims and switches the dimming channel using optional centre biased retractive switch.

**Configured to presence detection:** Turns on automatically with occupancy. Maintains illuminance (dimming channel only). Press and release down switch to turn off. Press and release up switch to turn back on. Press and hold up switch to dim up, press and hold down switch to dim down. Turns off after occupancy. Channel 1 does not operate with switch.

**Configured to absence detection:** Press and release up switch to turn on. Maintains illuminance (dimming channel only). Press and release down switch to turn off. Press and hold up switch to dim up, press and hold down switch to dim down. Turns off after occupancy. Channel 1 does not operate with switch.

**Channel mode:** Set to “Switch and dim separate”

**Switch mode:** Set to “2 position switch separate”

Please note that the dimming signal is used to switch the dimming luminaire on/off and therefore the 230V feed to the luminaire fitting must come from the permanent live supply.

---

Please note that the centre retractive switch will provide control for the dimming luminaire(s) only. The non-dimming luminaire(s) will be controlled by the sensor.
When power is applied to the unit, the load will turn on immediately.

Set the timeout to 10 seconds, vacate the room or remain very still and wait for the load to switch off.

Check that the load switches on when movement is detected.

The unit is now ready for programming.

What if the load does not turn ON?
- Check that the live supply to the circuit is good.
- Check that the load is functioning by bypassing the sensor (e.g. link terminals L and L/Out on Channel1).
- If the detection range is smaller than expected, check the diagram on page 2. Rotating the sensor slightly may improve the detection range.

HINT: The Walk Test LED function can be used to check that the unit is detecting movement in the required area.

What if the load does not turn OFF?
- Ensure that the area is left unoccupied for longer than the Time Out Period.
- Ensure that the sensor is not adjacent to circulating air, heaters or lamps.
The functionality of the EBDSM-DD is controlled by a number of parameters which can be changed or programmed by any of the following devices:

- **UHS5 Infrared Handset.** See below for programmable functions.
- **UN LCD HS Infrared Handset (with LCD).** See user guide for full programming details.

For most basic programming operations the UHS5 handset can be used and the following procedures are based on using this device.

Point the handset at the Sensor and send the required programming commands to the unit as shown below.

Valid commands will be indicated by a red LED flash. See page 1 for details of other LED responses.

*Note: other functions on the UHS5 which are not shown below are not applicable to this product.*

Technical data

Dimensions: See diagrams opposite
Weight: 0.15kg
Supply Voltage: 230VAC +/- 10%
Frequency: 50Hz
Maximum Load:

- **Channel 1 (switching):** 10A of lighting and/or ventilation including incandescent, fluorescent, compact fluorescent, low voltage (by switching the primary of transformer).
- **Channel 2 (dimming):** Maximum number of DSI or DALI ballasts is 10 unless the relay is disabled then it is 20.

Power consumption:
- On 625mW, Off 807mW

Dimming output:
- Basic insulation only. Although low voltage, this is not an SELV output and should be treated as if mains potential. Use mains rated wiring.

Terminal Capacity: 2.5mm²
Temperature: -10°C to 35°C
Humidity: 5 to 95% non-condensing
Material (casing): Flame retardant ABS and PC/ABS
Type: Class 2
IP rating: 40 without gasket. 54 with gasket.

Compliance:
- EMC-2004/108/EC
- LVD-2006/95/EC
